Lab 1 Specifications

Lab-specific Specifications

Proficiency

□ Development board is fully assembled (e.g., all parts soldered)
□ Verilog module to control LEDs and a 7-segment display written
☐ FPGA programmed with Verilog code.
\square 7-segment display can display all sixteen hexadecimal digits from $0x0$ through $0xF$
☐ All digits are unique (e.g., 0x6 and 0xb are different shapes)
□ DIP switches to control the display are arranged so that each adjacent switch controls
the next bit. (e.g., the switch for bit 0 is next to the switch for bit 1, which is next to
the switch for bit 2, etc.)
☐ LEDs display the specified logic operations properly.
Excellence
☐ Calculations provided to demonstrate that the current draw for each segment in the seven-segment display is within recommended operating conditions.
☐ ModelSim simulation (either manually force or automatic testbench) to demonstrate that
the design is working properly.
☐ All digits are equally bright, regardless of the number of segments illuminated.

General Specifications

Proficiency

Genera	al Schematic Specifications
□ A □ C □ N □ A	All pin names labeled All pin numbers labeled Crossing wires clearly identified as junction or unconnected Neat layout (e.g., clear organization and spacing) All parts labeled with part number All component values present
\mathbf{Block}	Diagram
	Block diagram present with one block per SystemVerilog module Each block includes all input and output signals
HDL .	& Code Specifications
Genera	al Formatting
□ I □ N (l	Descriptive filename (e.g., lab2_jb.sv) Descriptive variable names Neat formatting (e.g., standard indentation, consistent formatting for variable names kebab-case/snake_case/camelCase/PascalCase)) Descriptive and clear function/module names
Commo	ents
	Comments to indicate the purpose of each function/module
Lab W	Vriteup/Summary
d d d E d F S P V d V d	Brief (e.g., 3-5 sentence) description of the main goals of the assignment and what was lone. Explanation of design approach. How did you go about designing and implementing the lesign? Explanation of testing approach. How did you verify your design was behaving as expected? Statement of whether the design meets all the requirements. If not, list the shortcomings Number of hours spent working on the lab are included. Vriteup contains minimal spelling or grammar issues and any errors do not significantly letract from clarity of the writeup.
	Optional) List commments or suggestions on what was particularly good about the ssignment or what you think needs to change in future versions.

Excellence

General Schematic Specifications

☐ Standard symbols used for all components where applicable
☐ Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side)
9
☐ Title block with author name, title, and date
HDL & Code Specifications
General Formatting
\square Name, email, and date at the top of every file
☐ Comment at the top of each source code file to describe what is in it
☐ Clear and organized hierarchy (e.g., deliniation between top level modules and submodules)
Testbenches
☐ Testbenches written for each individual module to demonstrate proper operation
☐ Testbench output included in the report
Lab Writeup/Summary
☐ Writeup is free of spelling and grammar issues
