Lab 5 Specifications

Lab-specific Specifications

Proficiency

\square Design plays Für Elise from provided starter code
\square Note durations match the durations specified in the starter code for Für Elise (i.e., the
tune plays at the correct tempo)
\square Individual pitches are accurate to within 1% across the frequency range (of 220-1000 Hz)
(calculations should be provided in the report to verify this)
\square All rests (pauses with no sound) are played properly
☐ Code uses #define macros for memory-mapped registers
Excellence
\square Report contains accurate calculations for minimum duration supported
☐ Report contains accurate calculations for maximum duration supported
☐ Report contains accurate calculations for minimum frequency supported
□ Report contains accurate calculations for maximum frequency supported
\square Report provides documentation and calculations to show that the durations and pitches
are correct based on the timer configuration.
\square Design contains potentiometer to control the output volume.
\square Design plays an extra composition of your choice. You need not compose the tune from
scratch, it is acceptable to transpose an existing tune.

General Specifications

Proficiency

Genera	al Schematic Specifications
□ A □ C □ N □ A	All pin names labeled All pin numbers labeled Crossing wires clearly identified as junction or unconnected Neat layout (e.g., clear organization and spacing) All parts labeled with part number All component values present
\mathbf{Block}	Diagram
	Block diagram present with one block per SystemVerilog module Each block includes all input and output signals
HDL .	& Code Specifications
Genera	al Formatting
□ I □ N (l	Descriptive filename (e.g., lab2_jb.sv) Descriptive variable names Neat formatting (e.g., standard indentation, consistent formatting for variable names kebab-case/snake_case/camelCase/PascalCase)) Descriptive and clear function/module names
Commo	ents
	Comments to indicate the purpose of each function/module
Lab W	Vriteup/Summary
d d d E d F S P V d V d	Brief (e.g., 3-5 sentence) description of the main goals of the assignment and what was lone. Explanation of design approach. How did you go about designing and implementing the lesign? Explanation of testing approach. How did you verify your design was behaving as expected? Statement of whether the design meets all the requirements. If not, list the shortcomings Number of hours spent working on the lab are included. Vriteup contains minimal spelling or grammar issues and any errors do not significantly letract from clarity of the writeup.
	Optional) List commments or suggestions on what was particularly good about the ssignment or what you think needs to change in future versions.

Excellence

General Schematic Specifications

☐ Standard symbols used for all components where applicable
☐ Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side)
9
☐ Title block with author name, title, and date
HDL & Code Specifications
General Formatting
\square Name, email, and date at the top of every file
☐ Comment at the top of each source code file to describe what is in it
☐ Clear and organized hierarchy (e.g., deliniation between top level modules and submodules)
Testbenches
☐ Testbenches written for each individual module to demonstrate proper operation
☐ Testbench output included in the report
Lab Writeup/Summary
☐ Writeup is free of spelling and grammar issues
